Abstract: The New Source Performance Standards (NSPS) for Secondary Lead Smelters (40 CFR Part 60, Subpart L) apply to existing facilities and new secondary lead smelting facilities: any pot furnace of more than 250 kg (550 lb) charging capacity, blast (cupola) furnaces, and reverberatory furnaces. The affected facilities include any facility producing lead from a lead bearing scrap material by smelting to the metallic form. Blast furnace means any furnace used to recover metal from slag. Reverberatory furnaces include furnaces of various types, e.g., stationary, rotating, rocking and tilting. New facilities include those that commenced construction, modification, or reconstruction after the date of proposal. This information is being collected to assure compliance with 40 CFR Part 60, Subpart L.

In general, all NSPS standards require initial notifications, performance tests, and periodic reports by the owners/operators of the affected facilities. They are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the

operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all affected facilities subject to NSPS.

Form Numbers: None.

Respondents/affected entities: Secondary lead smelting facilities.

Respondent's obligation to respond: Mandatory (40 CFR Part 60, Subpart L).

Estimated number of respondents: 12 (total).

Frequency of response: Initially.

Total estimated burden: 32 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$3,620 (per year), which includes \$0 annualized capital/startup and/or operation & maintenance costs.

Changes in the Estimates: The adjustment decrease in burden from the most recently-approved ICR is due to a decrease in the number of sources. There is a decrease in the number of estimated sources from 14 to 12 due to consolidation within the sector. The reduced number of estimated sources also led to a decrease in the number of responses.
